Dr. Tea Nguyen, DPM

is a board certified podiatrist with a subspecialty in minimally invasive surgery and diabetic wound care. Her extensive fellowship training at UT Southwestern in Dallas was the foundation for her passion in helping at-risk people prevent major amputations. She offers office-based surgery to prevent recurrence of diabetic foot ulcers, which reduces common postop complications associated with traditional open surgery. She owns a private practice in Watsonville, is married to Dr. Paul Nguyen and has a daughter named Vylet.

CONCIERGE DIABETIC FOOT & WOUND CARE

DIRECT SPECIALTY CARE

CONCIERGE CARE

- Get faster access to a wound expert who can quickly identify the cause & treat it with minimally invasive solutions.
- A concierge model means paying the doctor directly, which allows patients to have a personal podiatrist who is accessible 24/7 by phone, email or telemedicine.
- With direct access, care is more consistent and personalized, since no two patients are alike.
- Priority scheduling means you can be seen within 3 days, sooner if urgent so that you can avoid the emergency room.
- If you need emergency room care, I will help you navigate the complex nature of hospital care and coordinate with your other doctors.
- This type of practice allows me to give patients my undivided attention who are at highest risk of a major amputation.
- Have peace of mind that your personal podiatrist knows you and will advocate for you.

SERVICES

Preventive Care

Maintenance care including toenail debridements, callus trimming, circulation screening, & protective footwear recommendations to prevent diabetic foot ulcers.

Diagnostics

In-house imaging including digital xrays, ultrasound & live fluoroscopic imaging are all available within reach, without having to wait at another facility.

Expert Wound Care & Minimally Invasive Surgery

Diabetic foot ulcers often have an underlying bone deformity that can be addressed with minimally invasive surgery. As the only board certified minimally invasive surgeon and fellowship-trained wound specialist, Dr. Tea has demonstrated her commitment in giving her patients the best chance to heal with modern techniques.
